BACKGROUND

Currently, in Ayurvedic hospitals, diet charts are prescribed manually by doctors in handwritten form, tailored to each patient's needs. Existing software solutions primarily focus on macro- and micro-nutrient tracking but fail to align with Ayurvedic nutritional concepts. This gap creates inefficiencies, reduces accuracy, and makes it harder for practitioners to deliver holistic dietary care rooted in Ayurveda.

DETAILED DESCRIPTION

The problem envisages the development of a dedicated Ayurvedic Diet Management Software designed to efficiently create, manage, and organize patient-specific diet charts with both accuracy and ease. Unlike conventional nutrition tools, the platform will integrate modern nutritional metrics with Ayurvedic dietary principles—such as caloric value, food properties (Hot/Cold, Easy/Difficult to digest), and the six tastes (Rasa).

EXPECTED SOLUTION

The proposed solution should provide an intuitive platform tailored for Ayurvedic dietitians, enabling quick food input, comprehensive nutrient tracking, and Ayurvedic dietary categorization.

KEY FEATURES:

• Scientifically calculated nutrient data for diverse food categories, customized for men, women, and children across all age groups.

• A dynamic food database of 8,000+ items covering Indian, multicultural, and international cuisines.

• Automated diet chart generation with nutritionally balanced, Ayurveda-compliant plans.

• Comprehensive patient management module including age, gender, dietary habits, bowel movements, water intake, and other parameters.

• Recipe-based diet charts with automated nutrient analysis.

ADDITIONAL FEATURES:

• Security & Compliance: Ensure patient data privacy following health data regulations.

• User Experience: Clean, user-friendly interface tailored to Ayurvedic workflows.

• Integration Potential: Capability to connect with HIS/EHR systems.

• Mobile Support: Compatibility with mobile/tablets for easy doctor/patient access.

• Reporting Tools: Printable diet charts and detailed patient reports.
